Soil and plant scientists look at soil, plants and crops.

They test dirt, plants and crops. Some figure out how to treat sick plants and trees. They help people figure out the best ways to use their land. They know what plants grow best in different kinds of soil.

Match the crop, plant or tree to its picture.

This crop gets very tall before you pick it.

lily pad

Frogs like to hang out on these at the pond.

oak tree

A lot of people get this flower on Valentine's Day.

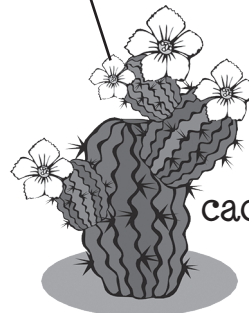

corn

This plant grows in hot, dry and sandy places.

rose

Squirrels like the nuts on this tree.

cactus
