2013

SOUTH DAKOTA

Labor Market Report

Table of Contents

Population

South Dakota's population has been increasing steadily for many years, a trend which continued in 2013. According to estimates published by the U.S. Census Bureau, our population increased by 81,000 or 11 percent over the last 10 years. From 2012 to 2013, South Dakota's population gained 10,830 people, growth of 1.3 percent. The largest growth has taken place in our two Metropolitan Statistical Areas (MSAs), Rapid City and Sioux Falls. Population in those two metro areas increased by 22 percent and 23 percent, respectively, over the last 10 years. From 2012 to 2013, the Rapid City MSA grew by 1.9 percent, while the Sioux Falls MSA grew by 2.5 percent. According to the most recent population estimates (2013), out of the nearly 845,000 South Dakota residents, 385,000 (46 percent, or almost one out of two people) live in either the Rapid City or Sioux Falls MSA.

South Dakota Population Estimates

(as of July 1 each year)

|	2012	2013
South Dakota	834,047	844,877
Rapid City MSA	138,781	141,431
Sioux Falls MSA	237,649	243,513

Labor Force

Labor Force Participation Rate

The residents of South Dakota participate in the labor force at a very high rate. The most recent annual Current Population Survey (CPS) figures show South Dakota's labor force participation rate was 69.6 percent in 2013. In other words, nearly70 percent of all (non-institutionalized) residents age 16 years and older were in the labor force, either working or looking for work. This compares to a 2013 national average of 63.2 percent. Historically, South Dakota has consistently had higher rates of labor force participation compared to the nation.

Labor Force Participation Rates

■ United States ■ South Dakota
Source: U.S. Bureau of Labor Statistics, Current Population Survey.

South Dakota's participation rate of 69.6 percent was the fifth-highest rate of all states. North Dakota had the highest rate at 72.9 percent, followed by Nebraska at 72.3 percent, Minnesota at 70.1 percent and Iowa at 69.8 percent. Youth in South Dakota were also more active than all but three states as participants in the labor force. In 2013, 52.3 percent of the state's youth (age 16 to 19 years) were in the labor force, compared to the national rate of 34.5 percent. North Dakota had the highest rate at 54.1 percent, followed by Iowa at 53.3 percent and Nebraska at 52.5 percent. The District of Columbia had the lowest youth participation rate at 21.9 percent.

2013 Annual Average Labor Force Participation Rates

|	Total	16-19	20-24	25-34	35-44	45-54	55-64	65+
United States	63.2	34.5	70.7	81.2	82.2	79.7	64.4	18.7
South Dakota	69.6	52.3	79.2	88.5	85.8	86.5	75.2	23.6
Source: Bureau of Labor Statistics, U.S. Department of Labor, Geographic Profile of Employment.								

At the other end of the age spectrum, South Dakota ranked sixth in the percentage of residents 65 years and older who were working or looking for work. In our state, 23.6 percent of residents in this age group participated in the labor force in 2013 which was much higher than the national average of 18.7 percent.

A closer look at some of the demographic groups shows South Dakota's percentage of residents in the labor force ranks near the top nationally in many instances. With a female labor force participation rate of 65.1 percent in 2013, South Dakota ranked sixth, behind the top ranked state of North Dakota's 67.8 percent by only 2.7 percentage points. The national labor force participation rate in 2013 for women was 57.2 percent.

The state's male labor force participation rate of 74.1 percent ranked tenth, out of the fifty states and the District of Columbia. Labor force participation rates throughout the nation varied from Nebraska with a rate of 78.7 percent to West Virginia with a rate of 59.6 percent, a difference of nearly 20 percentage points. South Dakota, however, was well above the National average in 2013 which was 69.7 percent.

Unemployment Rate

The 2013 annual average unemployment rate was 3.8 percent in South Dakota, compared to the national rate of 7.4 percent. South Dakota's unemployment rate has steadily decreased since the end of the recession, peaking at an annual average of 5.2 percent in 2009.

Total Employment

The U.S. Bureau of Economic Analysis (BEA) publishes employment data for state and local areas, which includes an estimate of the total number of jobs, including detail by full-time or part-time status (full-time and part-time jobs are counted at equal weight) and by place of work. Employees, sole proprietors and active partners are all included, but unpaid family workers and volunteers are not. Proprietors are those workers who own and operate their own businesses and are reported as either farm or nonfarm workers.

The number of workers covered by unemployment insurance is a key component of the employment data published by the BEA and in information compiled by the U.S. Bureau of Labor Statistics. South Dakota data on covered workers is included later in this report. More information regarding covered workers in South Dakota is also available on the Labor Market Information Center website at: http://dlr.sd.gov/lmic/menu_covered_workers.aspx.

BEA Total Employment Growth

Source: U.S. Bureau of Economic Analysis
The chart above, using the BEA data, shows annual employment change during the 2000-2013 period. Comparative data is included for the United States, South Dakota and the Plains Region (Iowa, Kansas, Missouri, Nebraska, North Dakota and South Dakota).

For the 2008-2009 period, which reflected the worst impact of the recession, South Dakota had a total employment loss rate of 0.8 percent, compared to a loss rate of 2.2 percent for the Plains Region and 3.0 percent for the nation. South Dakota's total employment growth began an uphill trend after 2008-2009 which continued through 2012-2013.

The two employment sectors which comprise total employment include proprietor employment and wage and salary employment. Total employment for all three areas had positive growth between 2010-2013. The largest percent employment increases following the recession came from proprietor employment. However, since then, wage and salary employment increases have also improved progressively each year.

Growth by Employment Sector

Total Employment	2008-2009	2009-2010	2010-2011	2011-2012	2012-2013
South Dakota	-0.8%	0.0%	1.4%	1.9%	0.8%
Plains Region	-2.2%	-0.9%	1.5%	1.7%	1.6%
United States	-3.0%	-0.7%	1.9%	1.9%	1.9%
Proprietor Employment	**2008-2009**	**2009-2010**	**2010-2011**	**2011-2012**	**2012-2013**
South Dakota	2.7%	0.1%	2.5%	1.7%	1.7%
Plains Region	1.3%	-0.6%	3.0%	2.1%	1.8%
United States	2.1%	0.3%	4.4%	2.6%	1.9%
Wage and Salary Employment	**2008-2009**	**2009-2010**	**2010-2011**	**2011-2012**	**2012-2013**
South Dakota	-1.8%	0.0%	1.0%	2.0%	0.5%
Plains Region	-3.1%	-0.9%	1.1%	1.6%	1.5%
United States	-4.3%	-1.0%	1.2%	1.6%	1.9%
Source: U.S. Bureau of Economic Analysis.					

In South Dakota, proprietor employment slowed from 2009-2010 after the recession but did not lose any employment. In fact, the Plains Region in 2009-2010 was the only area that experienced a decrease of proprietor employment at any time during or after the recession. Generally, the expectation would be the level of proprietor employment to also decline as the recession progressed; however, when people are laid off with little re-employment hopes, some see a good opportunity to venture out on their own.

The Bureau of Labor Statistics (BLS) also publishes national estimates of the self-employed, for both the agriculture (and related industries) and the nonfarm industry sectors, from the Current Population Survey (CPS) data. The CPS data shows since the recession ended in 2009, self-employed workers have continued to decrease, as displayed in the table at the top of the next page.

Self-Employment

Total self-employed decreased by 423,000 (-4.3 percent). Of the two components, the agriculture and related industries decreased by 47,000 workers (-5.6 percent). The nonfarm self-employed decreased by 376,000 (-4.2 percent).

Current Population Survey (CPS)
Self-Employed Workers

| Year	Total	Agriculture, Forestry, Fishing and Hunting	Nonagricultural Industries
2009	9,831,000	836,000	8,995,000
2010	9,681,000	821,000	8,860,000
2011	9,449,000	846,000	8,603,000
2012	9,529,000	780,000	8,749,000

South Dakota Worker Commuting

Inflow and Outflow of Workers (Primary Jobs)

At the beginning of the second quarter 2011 (most current data available), 356,447 people were employed in South Dakota. Of this total, 336,569 (94.4 percent) lived and worked in the state while 19,878 (5.6 percent) worked in the state but lived outside its borders.

During the same time frame, 350,747 workers lived in the state, but not all of them worked there. Four percent, or 14,178 workers, lived in South Dakota, but worked outside the state. The table on the following page illustrates this in detail.

These figures count only primary jobs. Primary jobs are public- and private-sector jobs, one job per worker. A primary job is the highest paying job for an individual worker. Workers who have more than one job in the study area are counted only once.

South Dakota Worker Commuting

Note: Overlay arrows do not indicate directionality of worker flow between home and employment locations.
- Employed and Live in Selection Area
- Employed in Selection Area, Live Outside
- Live in Selection Area, Employed Outside

Primary Jobs: Public- and private-sector jobs, one job per worker. A primary job is the highest paying job for an individual worker.

Nonfarm Workers by Industry

Looking at the most current over-the-year trends for the nonfarm workers data, the South Dakota total nonfarm employment increased by 3,100 workers (or 0.7 percent) from 2012 to 2013. Most sectors showed positive gains over the year. Nationally, the nonfarm employment percentage gain over-the-year was 1.7 percent.

South Dakota has recovered from the recession with 417,100 workers in 2013, up from the lowest point of 388,200 in January 2010. The economic blow of the recent recession, which started in October 2008, had been softened somewhat by the agriculture economy, which helps to support South Dakota's total economy.

The total private industry had a gain of 3,200 workers (0.9 percent) over-the-year. Goods producing industries (which include mining, logging and construction plus manufacturing) in South Dakota had a gain of 600 workers (1.0 percent) during 2013. Service providing industries (which includes all other sectors except government) had a gain of 2,500 workers (0.7 percent).

South Dakota Statewide Nonfarm Wage & Salaried Workers by Industry

Industry	2012 Annual Average	2013 Annual Average	Net Change	Percent Change

Government	77,500	77,400	-100	-0.1%
Note: Numbers may not add due to rounding.				
Source: Labor Market Information Center, SD Department of Labor and Regulation.				

Manufacturing gained 400 workers (1.0 percent) from 2012 to 2013. This gain continues to reflect a comeback from the recessionary losses that occurred during the years 2008 and 2009. The manufacturing sector has experienced over-the-year employment gains since July 2010. In 2013, there were 41,600 workers, up from a low of 35,800 in January 2010. In the past 10 years, the manufacturing sector reached a high of 43,200 workers in July 2008, before the recession started.

The wholesale trade sector increased by 300 workers (1.5 percent) during the year. The strong agriculture economy in South Dakota served as a solid source of support to the wholesale trade industry, and the industry fared well during the recession. Wholesale trade reached a 10 year high of 20,300 in May 2013.

The mining, logging and construction sector had a gain of 200 workers (0.9 percent). The construction industry accounts for most of the workers within this sector. Data published by the U.S. Census Bureau shows new privately owned housing permits in South Dakota had a large increase of 1,212 (22.5 percent) this past year, from 4,178 permits in 2012 to 5,390 in 2013.

The retail trade sector was unchanged over-the-year with 51,000 workers. This sector is continuing to show growth since the recession. The retail trade sector is a very seasonal sector, normally peaking in December. Retail trade reflects more of a local consumers' confidence as there are many non-essential items sold in retail. The retail trade sector had reached a low of 47,900 in February 2010 during the recession. Retail trade has recovered from the recession.

Transportation, warehousing and utilities remained unchanged over the year, with 12,500 workers. In the past 10 years, this sector has remaining fairly stable, dipping slightly during the recession. Decreases in transportation and warehousing are correlated to the decreases in the trade industries. Transportation and warehousing employers accommodate the needs of wholesale trade and retail trade business as well as the agriculture industry.

The Information super sector decreased by 100 workers (1.6 percent) from 2012 to 2013. Information is made up of publishing including software, motion picture and sound recording, broadcasting and telecommunications industries. In the past 10 years, the industry has remained fairly stable but is trending downwards due to the reduced consumer demand.

Worker levels in the financial activities industry increased by 1,100 workers (3.7 percent). The worker level in 2012 was 28,600 and 29,700 in 2013. In the past 10 years, the financial activities sector peaked in July 2008 at 31,500. The sector reached a low of 27,900 in September 2011. During the recession, most of the losses came from national and local credit card operations, which were affected by consumer financial woes and legislatively restricted credit card practices. Non-credit card banking weathered fairly well. Since the recession, this sector has been steadily trending upwards.

Professional and business services had a gain of 200 workers (0.7 percent) from a level of 29,200 in 2012 to 29,400 in 2013. The professional and business services decreased slightly during the recession but fairly well overall. During that time frame, recession-affected businesses hired fewer workers through temporary help agencies and from businesses that reduced output. Reduced output led to businesses no longer needing the prior level of services provided by the sector.

The education and health services sector continued to show an increase and gained 900 workers (1.3 percent). State healthcare worker numbers have increased every year since the data was first recorded in 1972. The continued worker demand in this industry is related to several factors, including continued population growth, an aging population and specialized procedures which require additional staff. As life expectancy increases related to medical advancements, people are living longer, with the older population typically using health care services more often.

Leisure and hospitality increased by 100 workers (0.2 percent). The 2013 annual average was 44,400. In the past 10 years, the sector has remained consistent, peaking in August with lows in January. Leisure and hospitality reached a 10 year high in August 2013 with 50,700 workers. Leisure and hospitality was only slightly affected during the recession due to South Dakota being a good value for visitors. Other Services sector has been trending upwards and recovering from the recession. The sector had a small gain of 200 workers (1.3 percent) from a worker level of 15,800 in 2012 to 16,000 in 2013.

Total government reflected a loss of 100 workers (0.1 percent). Federal government had a decrease of 400 workers (3.6 percent) to a level of 11,100 workers. State government had a small gain of 100 workers (0.5 percent) and local government increased by 100 workers (0.2 percent).

Rapid City Metropolitan Statistical Area (RCMSA) Nonfarm Workers

The Rapid City MSA's total nonfarm worker level increased 600 (1.0 percent) from 2012 to 2013. Gains were found in financial activities (300 workers or 7.3 percent), educational and health services (200 workers or 1.9 percent), and manufacturing (200 workers or 6.9 percent).

Losses were found in mining, logging and construction (loss of 100 workers or 2.3 percent), retail trade (loss of 100 workers or 1.1 percent) and government (loss of 100 workers or 1.0 percent) sectors.

The sectors that were unchanged were wholesale trade (2,100 workers), information (900 workers), professional and business services (5,000 workers), leisure and hospitality (9,100 workers) and other services (2,900 workers).

Sioux Falls Metropolitan Statistical Area (SFMSA) Nonfarm Workers

The Sioux Falls MSA total nonfarm worker level increased by 3,200 workers (2.2 percent) from 2012 to 2013. Most industry sectors added workers or remained stable, with the exception of the information subsector, which showed a drop of 100 workers (3.7 percent).

Balance of State Nonfarm Workers

The balance of state is comprised of all counties not defined as part of an MSA. Therefore, balance of state includes all counties except Pennington, Meade, Lincoln, Minnehaha, McCook and Turner. The remainder of state data allows one to see how industries are doing in the more rural areas of South Dakota.

Total nonfarm employment in this area had a decrease of 700 workers (0.3 percent). Gains were found in financial activities (200 workers or 2.2 percent), retail trade (100 workers or 0.4 percent), leisure and hospitality (100 workers or 0.5 percent) and other services (100 workers or 1.2 percent).

Losses were found in professional and business services (loss of 400 workers or 3.6 percent), mining, logging and construction (loss of 200 workers or 2.0 percent), government (loss of 200 workers or 0.4 percent) and manufacturing (loss of 100 workers or 0.4 percent) sectors.

The sectors that were unchanged were wholesale trade (10,100 workers), information (2,500 workers) and educational and health services (28,100 workers).

Seasonally adjusted estimates for the years 2012 and 2013 show the nonfarm employment level trending upwards for South Dakota. As illustrated in the line graph on the following page, the national nonfarm worker level showed a steady trend through June 2013, and then started to slide back down again.

Quarterly Census of Employment and Wages

Covered Workers by Industry

The number of employees covered by unemployment insurance in 2013 was 404,648 workers. This represents an increase of 1.0 percent from 2012. This chart indicates that nine industries showed worker gains while one industry decreased and one industry remained unchanged during 2013. In 2013, the number of covered wage and salaried workers equaled 95.8 percent of South Dakota's wage and salaried workers. Covered workers are counted at their place of work. A person who works for more than one covered employer is counted at each job.

Quarterly Census of Employment and Wages.

Annual Pay of Covered Workers

Annual pay reflects total compensation paid to covered workers in the form of wages, salaries, bonuses, commission and overtime pay during the year. Annual pay is calculated by dividing total payroll by the average number of workers. The statewide annual pay for workers covered by unemployment insurance for 2013 was $37,226. This represents an increase of 1.9 percent from 2012.

Annual pay is affected by the number of hours worked and the rate of pay. Full-time workers normally have higher annual pay than part-time workers do. Many of the industries with the lowest annual pay have a large percentage of part-time jobs. Industry specific annual pay is determined by the mix of full-time and part-time workers and high-paying and low-paying jobs. The leisure and hospitality industry group has the lowest industry annual pay of $14,108 because these types of businesses typically hire many part-time workers. Federal government workers have the highest annual pay at $58,106.

Annual Pay of Covered Workers

Estblishment Size

Establishment size data provides a comparison of the number of small and large businesses in South Dakota. The average number of workers at the worksite location determines establishment size. A worksite is generally defined as a single physical location at which predominantly one type of economic activity is conducted.

The table on the following pages shows small businesses are predominate in South Dakota. During 2013, the 0-9 workers size class had the largest number of establishments, accounting for 77.5 percent of all establishments. Smaller businesses (less than 10 workers) employed only 19.8 percent of the covered workers in South Dakota in 2013. The number of workers is evenly dispersed among the establishment size groups.

LMI Barometer

In an effort to better utilize the powerful "real-time" labor market information available through the SDWORKS database (the South Dakota Department of Labor and Regulation's online system for employers to list job openings and job seekers to search for jobs), the Labor Market Information Center incorporated an LMI Barometer in its monthly South Dakota Labor Bulletin during 2014.

The LMI Barometer compares the level of unemployed, the number of job openings posted on SDWORKS, and the number of newly hired workers (new hires) using the most current data available. As this data is not seasonally adjusted, seasonal patterns are evident.

From January 2007 through June 2014, the level of unemployed in South Dakota peaked in the first quarter of 2010 following the recession. The level of job openings continued to decline after the end of the recession was officially announced by the National Board of Economic Research (NBER). However, an upward trend began in January 2010 with the level of job openings at 10,900 in December 2013. The level of unemployed for the same time period was 9,900.

The Labor Market Information Center is currently exploring the possibility of incorporating more detailed sources of real-time labor market information, such as Geographic Solution's Labor Market Analyzer.

Personal Income

The Bureau of Economic Analysis (BEA) releases personal income data. The personal income of an area is the income that is received by, or on behalf of, all the individuals who live in a specific geographic area. The total payroll of workers covered by unemployment insurance is a component of wage and salary disbursements included in this statistic.

In South Dakota, the level of personal income grew steadily for several years prior to the recession. In fact, South Dakota's growth in personal income for the 2000-2009 period surpassed the rate for both the Plains Region (Iowa, Kansas, Missouri, Nebraska, North Dakota and South Dakota) and the nation. South Dakota's personal income grew by 53.4 percent, compared to a rate of 40.8 percent for the Plains Region and 39.9 percent for the nation.

Since the recession and during the economic recovery phase, South Dakota's personal income has continued to grow faster than the Plains Region and the nation. From 2010 to 2013, South Dakota's personal income has increased 16.2 percent, followed by the Plains Region at 15 percent and the nation at 13.3 percent.

Dividing the personal income of an area by the residents of that given area produces a widely used economic indicator called per capita personal income. Since 2000, South Dakota's per capita personal income has increased by 67.1 percent, compared to 53.3 percent for the Plains Region and 45.6 percent for the nation. South Dakota ranked 21st out of the 50 states with a per capita income of $45,558 in 2013. This means the average personal income for residents in South Dakota was higher than 29 other states. In the year 2000, South Dakota ranked 35th.

Per Capita Personal Income

Poverty

The American Community Survey is an annual survey conducted by the U.S. Census Bureau to collect data on socioeconomic, housing and demographic characteristics, including poverty status, of individuals and families by state. Poverty status is determined by comparing annual income to a set of dollar values called thresholds that vary by family size, number of children and the age of the householder. If a family's before-tax money income is less than the dollar value of their threshold, that family and every individual in it is considered to be in poverty. For people not living in families, poverty status is determined by comparing the individual's income to his or her threshold. The poverty thresholds are updated annually to allow for changes in the cost of living using the Consumer Price Index for all Urban Consumers (CPI-U). The thresholds do not vary geographically.

The American Community Survey is a continuous survey, and people respond throughout the year. Since income is reported for the previous 12 months, the appropriate poverty threshold for each family is determined by multiplying the base-year poverty threshold (1982) by the average of monthly CPI values for the 12 months preceding the survey month.

The percent of families in South Dakota with incomes below the poverty threshold increased each year from 2009 to 2011. In 2012, the percent of families decreased by one full percentage point to 8.6 percent; however, in 2013 the rate was back up to 9.2 percent. National data shows poverty levels gradually increased from 9.6 percent to 11.9 percent from 2007 to 2012. The 2013 level of 11.6 percent indicates a slight, statistically insignificant, decrease over the year. The percent of 'all people' in the United States with incomes below the poverty threshold had the same trend as the 'all families' data set; however, the South Dakota 'all people' data set showed increases in 2009 and 2010 before beginning a downward trend in 2011 and 2012. The poverty rate for 'all people' in South Dakota increased in 2013 to 14.2 percent while the national rate did not change significantly.

Projections

Population Projections

Population projections for the 2010-2035 time period released by the South Dakota State Data Center show South Dakota's total population will reach 889,447 by the year 2020. This reflects an increase in the core work-force (age 16-64) of approximately 14,000, 2.7 percent.

Although most of the counties in South Dakota are expected to show population declines, the Rapid City (Meade and Pennington counties) and Sioux Falls (Lincoln, McCook, Minnehaha and Turner counties) Metropolitan Statistical Areas (MSAs) will be the fastest growing areas in the state.

South Dakota Population Projections

Industry Employment Projections

Employment projections for 2012-2022 by industry and class of workers were developed by the Labor Market Information Center. Historical time-series data and state and national economic trends were incorporated in various statistical models to project employment levels. (A general assumption is made that no major catastrophic events or natural disasters will occur during the projection period that would significantly affect economic activities of these industries.)

A look at which types of industries are growing, and which are not, provides a synopsis of the economy as a whole. From 2012 to 2022, the total number of workers in South Dakota is projected to increase by 33,225 (or 7.0 percent) to a total of 505,870 workers. On the national level, the total employment level is expected to increase by 15.6 million jobs (10.8 percent, or about 1.0 percent annually). The national growth rate is higher than South Dakota's rate because the United States was hit harder with job losses during the recession. Therefore, the national projections include a higher rate to account for recovery from the recession.

The South Dakota projections include three categories of workers:

- ☑ Nonfarm self-employed and unpaid family workers

- ☑ Agriculture and related workers (farm employment)

- ☑ Quarterly Census of Employment and Wages workers

The 'Quarterly Census of Employment and Wages workers' category includes the number of workers by industry based on qurterly reports of employment and wages submitted to the Department of Labor and Regulation by employers whose workers are covered by unemployment insurance in the state.

Nationally, overall employment in Agriculture, Forestry, Fishing and Hunting is expected to decrease by 223,500 workers (or 10.6 percent) through 2022. This industry has been declining since 1980 both nationally and in South Dakota. One of several reasons cited for the declines is the consolidation of smaller farms; technological advances have also improved production and efficiency while requiring fewer workers.

South Dakota Wage and Salaried Workers by Industry Division
2012-2022

Industry Title	2012 Workers	2022 Workers	Actual Change	Percent Growth
Total of All Industries	472,645	505,870	33,225	7.0%
Non-agricultural Self-employed and Unpaid Family Workers	28,200	29,165	965	3.4%
Agriculture, Forestry, Fishing and Hunting (Farm Employment)	35,880	35,890	10	0.0%
Nonfarm Total Wage and Salaried Workers (excludes Self-employed and Unpaid Family Workers)	408,565	440,815	32,250	7.9%
Notes:				

Notes:

Data is preliminary and subject to revision.

Number of jobs data for 2012 and 2022 rounded to nearest five. Data for industries with 2012 employment less than 200 not included. Data presented for industries will not sum to totals due to rounding and non-publishable data for additional industries being included in totals.

Industry titles are based largely on the North American Industry Classification System (NAICS).

Source: Labor Market Information Center, South Dakota Department of Labor and Regulation.

The South Dakota industries projected to grow the most over the next 10 years are trending consistently with the rest of the nation. The service-providing industries are anticipated to generate most of the 10.8 percent national employment growth according to the U.S. Bureau of Labor Statistics (BLS). Nationally, industries related to health care, personal care and social assistance, and construction are projected to have the fastest job growth between 2012 and 2022. The Health Care and Social Assistance sector is projected to account for nearly one-third of the total projected increase in jobs nationally, adding 5 million jobs.

Ambulatory Health Care Services

In South Dakota, the number of workers employed in the Ambulatory Health Care Services subsector is projected to increase by 2,630 workers (or 17.6 percent) over the next 10 years. This subsector provides health care services directly or indirectly to ambulatory patients and typically does not provide inpatient services. According to the BLS, the Outpatient, Laboratory and Other Ambulatory Care subsector is expected to be among the largest and fastest growing industries in terms of both employment and real output. Nationally, this subsector is projected to increase by 522,300 workers (45.4 percent) in the coming decade. The aging population and advancements in medical technologies will help ensure continued worker growth within the health care services industry. The continuing shift from inpatient care to outpatient treatment will boost worker growth in outpatient care centers across South Dakota.

South Dakota Industry Employment Projections 2012 - 2022

Ten Fastest Growing Industries

Industry Title	2012 Workers	2022 Workers	Actual Change	Percent Growth
Ambulatory Health Care Services	14,910	17,540	2,630	17.6%
Professional, Scientific and Technical Services	11,540	13,450	1,910	16.6%
Museums, Historical Sites, and Similar Institutions	505	585	80	15.8%
Construction of Buildings	5,095	5,885	790	15.5%
Waste Management and Remediation Services	800	915	115	14.4%
Heavy and Civil Engineering Construction	3,270	3,725	455	13.9%
Social Assistance	8,830	10,045	1,215	13.8%
Wholesale Electronic Markets and Agents and Brokers	1,530	1,740	210	13.7%
Transportation Equipment Manufacturing	2,750	3,115	365	13.3%
Specialty Trade Contractors	11,765	13,320	1,555	13.2%

Notes:

Professional, Scientific and Technical Services

The Professional, Scientific and Technical Services subsector is projected to add 1,910 workers in South Dakota (16.6 percent) over the next decade. This subsector is comprised of establishments that make available the knowledge and skills of their employees, often on an assignment basis, where an individual or team is responsible for the delivery of services to the client. The individual industries of this subsector are defined on the basis of the particular expertise and training of the services provider. This industry includes several subsectors, such as legal services, accounting services, engineering services, management consulting, computer design services, etc. A major force contributing to the growth of this subsector has been the continued advancements in science and technology.

Museums, Historical Sites and Similar Institutions

Worker levels in the Museums, Historical Sites and Similar Institutions industry are projected to increase by 80 workers (15.8 percent). This growth is driven by the retirement of more baby boomers who will likely take advantage of more opportunities for travel and participating in leisure activities at businesses such as casinos, golf courses and amusement establishments. Another factor to consider in South Dakota pertaining to this subsector's growth is "stay-cations," with families choosing to make in-state visits to save on travel expenses.

Construction of Buildings

The Construction of Buildings subsector in South Dakota is projected to increase worker levels by 790 (15.5 percent). The 15.5 percent growth is actually much lower than historical patterns due to the recession's toll on the industry from 2009 to 2010. During the recession, the South Dakota worker levels within this sector remained relatively stable compared to the United States. South Dakota's projected growth is less substantial than national figures due to far less impact from the recession. Job growth will result from increased construction of homes and office buildings, remodeling projects and the repair and replacement of the infrastructures. Even if the South Dakota and national economies do not experience robust growth in the next 10 years, the continued shifts in county populations from internal migration will keep construction demand up to some degree.

Waste Management and Remediation Service

The Waste Management and Remediation Services industry in South Dakota is projected to increase by 115 workers (14.4 percent) by 2022. This subsector is engaged in the collection, treatment and disposal of waste materials. Growth in this industry is driven by an increasing population and privatization of waste collection services. With population growth, there is more waste generated which increases the demand for the Waste Management and Remediation Service subsector. Environmental and recycling regulations can also drive the need for an increased workforce.

Heavy and Civil Engineering Construction

The number of workers in the Heavy and Civil Engineering Construction subsector is projected to increase by 455 (13.9 percent). This subsector includes entities whose primary activity is the construction of entire projects such as highways, bridges, land subdivisions and utility systems. A major factor in this industry's growth is aging infrastructures and the need to maintain or replace components of highways and utility systems.

Social Assistance

The Social Assistance subsector (in the Health Care and Social Assistance sector) is projected to increase by 1,215 workers (13.8 percent) by 2022 in South Dakota. Industries in this subsector provide a wide variety of assistance services directly to their clients. This includes individual and family services, emergency and other relief services, vocational rehabilitation and child day care. Employment will be driven largely by the shift in demand for services from higher cost in-patient facilities to lower cost individual and family service providers.

Wholesale Electronic Markets and Agents and Brokers

The Wholesale Electronic Markets and Agents and Brokers subsector is projected to increase by 210 workers (13.7 percent) over the next 10 years in South Dakota. Industries in this subsector arrange for the sale of goods owned by others, generally on a fee or commission basis. This subsector's projected growth mirrors what is expected for its parent industry of Wholesale Trade. In South Dakota, the Wholesale Trade sector overall is projected to increase by 1,600 (8.2 percent) over the next decade. Nationally, employment in this industry is projected to experience one of the largest increases, 470,400 jobs, over the projection period. Wholesale trade involves businesses providing goods and services to other businesses, not consumers. As long as there is expansion in other industries, the Wholesale Trade industry will expand as well -- especially in electronic markets where technology is predominate.

Transportation Equipment Manufacturing

The worker levels in this subsector are projected to increase by 365 workers (13.3 percent) in South Dakota by 2022. The Transportation Equipment Manufacturing subsector produces equipment for transporting people and goods. Transportation equipment is a type of machinery. An entire subsector is devoted to this activity because of the significance of its economic size. As the economy grows and the demand for goods increases, transportation equipment manufacturing will be in higher demand to help facilitate the transportation of those goods to businesses and consumers.

Specialty Trade Contractors

The Specialty Trade Contractors subsector in South Dakota is projected to increase by 1,555 workers (13.2 percent) through 2022. This primary activity of establishments within this subsector is to perform specific activities related to building construction or other similar activities for all types of construction. Therefore, individual business establishments are not responsible for the entire project. Business establishments within this subsector typically perform activities such as pouring concrete, site preparation, plumbing, painting and electrical work. This subsector's growth is closely related to the Construction of Buildings subsector. Nationally, the Construction industry was one of the hardest hit industries during the recession. As the economy continues to show growth and demand for improvement in existing and new buildings, the Specialty Trade Contractors subsector will continue to grow.

South Dakota Industry Employment Projections 2012 - 2022

Declining Industries

Industry Title	2012 Workers	2022 Workers	Actual Change	Percent Growth
Air Transportation	210	195	-15	-7.1%
Private Households	1,895	1,795	-100	-5.3%
Broadcasting (except Internet)	1,110	1,080	-30	-2.7%
Textile Product Mills	375	365	-10	-2.7%
Motion Picture and Sound Recording Industries	545	535	-10	-1.8%
Couriers and Messengers	1,285	1,265	-20	-1.6%
Publishing Industries (except Internet)	1,635	1,610	-25	-1.5%
Computer and Electronic Product Manufacturing	2,260	2,230	-30	-1.3%
Paper Manufacturing	760	750	-10	-1.3%
Miscellaneous Store Retailers	2,925	2,900	-25	-0.9%
Telecommunications	2800	2790	-10	-0.4%

Notes:

Data is preliminary and subject to revision.

Number of jobs data for 2012 and 2022 rounded to nearest five. Data for industries with 2012 employment less than 200 not included. Data presented for industries will not sum to totals due to rounding and non-publishable data for additional industries being included in totals.

Industry titles are based largely on the North American Industry Classification System (NAICS).

Source: Labor Market Information Center, South Dakota Department of Labor and Regulation.

Declining industries are a result of several factors. Some South Dakota industries are in decline due to advances in technology, changes in business practices and other factors. According to the BLS, there are several macroeconomic factors, such as labor force trends, gross domestic product (GDP) and its components, and labor productivity that affect the growth in total employment. Nationally, a few sectors, such as manufacturing, utilities, information and federal government are projected to experience a slight decline in employment in the next ten years. The slight decline in employment is related to expected productivity gains and consolidation of firms. Declines in South Dakota are projected to be minimal. But since many South Dakota industries are considered small, even a small loss in employment levels in the projected 2022 value can notably impact a subsector.

Air Transportation

Worker levels in the Air Transportation subsector are projected to decrease by 15 workers (7.1 percent) through 2022 in South Dakota. Industries in the Air Transportation subsector provide air transportation of passengers and cargo using aircraft such as airplanes or helicopters. This subsector is contained in the Transportation and Warehousing sector. Nationally, this subsector is projected to decline by 52,100 workers (11.4 percent) over the next 10 years. The declines projected on the national and state levels can be attributed to technological innovation.

Private Households

The Private Households subsector (in the Other Services, except Public Administration industry) is projected to decrease by 100 workers (5.3 percent) by 2022 in South Dakota. The Private Households subsector includes households that employ workers on or about the premises in activities primarily concerned with the operation of the household. The recession impacted the Private Households industry, as some families could no longer afford the luxury of hiring individuals, such as cooks, maids or gardeners to take care of the daily running of the household. In South Dakota, most parents typically take advantage of daycare providers or youth recreational centers rather than hiring a household worker like a nanny. As the decline in this subsector continues, it will likely increase employment in other subsectors such as the Social Assistance subsector which includes child daycare services.

Broadcasting (except Internet)

Worker levels in the Broadcasting (except Internet) subsector are projected to decrease by 30 workers (2.7 percent) by 2022. This subsector includes establishments that create content or acquire the right to distribute content and subsequently broadcast the content. Nationally, the trend for this subsector is also on the decline. According to BLS, the information sector overall is projected to decrease nationally by 65,200 workers (2.4 percent) by 2022. Much of this trend is attributed to the decrease in broadcasted information caused by the rise of available information on the Internet, use of social media, etc.

Textile Product Mills

Worker levels in the Textile Product Mills subsector are projected to decrease slightly by 10 workers (2.7 percent) in the next decade. This subsector includes establishments that make textile products, excluding apparel. On a national level, this subsector is projected to be one of the most rapidly declining industries due to technological advances. Innovative machines are increasingly being utilized to replace the labor it once took to manufacture most textile goods.

Motion Picture and Sound Recording Industries

The Motion Picture and Sound Recording subsector in South Dakota is projected to have a slight decrease of 10 workers (1.8 percent) through 2022. Employment in this subsector is involved in the production and distribution of motion pictures and sound recordings. This subsector is included in the Information sector, which is also projected to have an overall decline in South Dakota. A major factor in the Motion Picture and Sound Recording subsector is the use of technological improvements in movie making and sound recording equipment, which will require fewer individuals to complete the final product. Nationally, the Audio and Video Equipment Manufacturing four-digit NAICS subsector is projected to decline by 3,500 workers (17.6 percent). The fall in demand for Audio and Video Equipment Manufacturing has a direct relationship to the Motion Picture and Sound Recording subsector.

Couriers and Messengers

Worker levels in the Couriers and Messengers subsector are projected to decrease by 20 workers (1.6 percent) by 2022. Individuals involved in this subsector provide intercity and/or local delivery of parcels. Nationally, this subsector is projected to decline as well, by 44,000 workers (8.3 percent) through 2022. Technological

advancements and improvements in communications efficiencies have dampened consumer demand in this particular subsector.

Publishing Industries (except Internet)

The number of workers employed in the Publishing Industries subsector is projected to decline by 25 workers (1.5 percent) in South Dakota. This subsector of the Information industry includes establishments engaged in the publishing of newspapers, magazines, other periodicals and books, as well as database and software publishing. The main reason for the slight worker decline in this subsector is the continued rise of Internet usage. The information and availability of content on the Internet creates less demand for newspapers and other printed materials.

Computer and Electronic Product Manufacturing

The number of workers in the Computer and Electronic Product Manufacturing subsector is projected to decrease by 30 workers (1.3 percent). This subsector is comprised of establishments that manufacture computers, computer peripherals, communications equipment and similar electronic products, as well as the establishments that manufacture components for such products. Technological advancements have improved the manufacturing process, consequently requiring less labor to achieve the same, if not greater, production output.

Paper Manufacturing

Worker levels in the Paper Manufacturing subsector are projected to decrease slightly by 10 workers (1.3 percent). This subsector includes establishments that make pulp, paper or converted paper products. The manufacturing of pulp involves separating the cellulose fibers from other impurities in wood or used paper. The manufacturing of paper involves matting these fibers into a sheet. Converted paper products are made from paper and other materials by various cutting and shaping techniques. The availability of information on the Internet and improved efficiencies in manufacturing processes has both contributed to the projected worker decline in this subsector.

Miscellaneous Store Retailers

The Miscellaneous Store Retailers subsector is projected to decrease by 25 workers (0.9 percent) over the next 10 years in South Dakota. This retail trade subsector is a catch-all for retailers who sell specific products that are not otherwise categorized in a specified retail code. Establishments in this subsector include stores with unique characteristics, such as florists, used merchandise stores, and pet and pet supply stores. Therefore, industrial coding can change often within this subsector.

The worker decline in this subsector is mainly due to industry coding changes. The Bureau of Labor Statistics (BLS), U.S. Department of Labor, administers the Annual Refiling survey in cooperation with all states, which includes an Industry Verification Form (IVF) employers complete to verify their industrial activity. The main purpose of the IVF form is to ask employers to verify a North American Industry Classification System (NAICS) industry description that represents their business's main activities. If the description provided on the survey form is correct, the employer is asked to check the appropriate box. If the description is incorrect, the employer is asked to briefly describe their business activities and the approximate percentage of the revenue or production

derived from each activity. This system helps ensure consistent classification, which improves the statistics of all BLS programs that use the industry classifications.

Telecommunications

The Telecommunications subsector is projected to decrease slightly by 10 workers (0.4 percent) over the next 10 years in South Dakota. This subsector is primarily engaged in operating, and/or providing access to facilities for the transmission of voice, data, text, sound and video. Nationally, the Telecommunications subsector is one of the more rapidly declining industries dropping by 51,000 workers (5.9 percent) through 2022. The major reason for the decline is the advancements in technology. As the Telecommunications subsector continues to become more technologically advanced and efficient, less workers will be needed.

Occupational Employment Projections

The Labor Market Information Center (LMIC) recently completed the 2012 to 2022 round of South Dakota occupational employment projections. Use of a nationally-adopted projections methodology allows for comparability of data across states. The methodology incorporates historical time-series employment data as well as state and national economic trends and uses various statistical models. (A general assumption is made that no major catastrophic events or natural disasters that would significantly affect economic activities of the occupations' industries will occur during the projection period.)

Occupational employment projections indicate which occupations will exhibit above average growth and be in high demand to 2022. Occupational employment projections also supply those who seek or provide career guidance with information on how the labor market is changing. The general outlook for South Dakota is characterized by job growth in the coming decade, based on historical trends. From 2012 to 2022, the total number of workers in South Dakota is projected to expand by 33,265 to a total of 505,870 (7.0 percent). The average annual demand for workers is projected to be 14,728. Nationally, the total number of workers is projected to increase to 160,983,700 from 145,355,800 (10.8 percent). Of the 30 occupations projected to have the largest percentage increase between 2012 and 2022 nationally, 14 are related to health care and five are related to construction, according to the U.S. Bureau of Labor Statistics (BLS). Every major occupational group except the Farming, Fishing and Forestry Occupations group is projected to gain jobs over the next 10 years.

The conservative growth rate for South Dakota compared to the nation is related to the recent recession. While the recession started on a national level in December of 2007, it took until the fourth quarter of 2008 for the recession to affect employment levels in South Dakota. Therefore, South Dakota is projected to have a more conservative growth rate than the nation because the recession's impact was less severe in our state.

Occupations Projected to Grow the Fastest

The following narrative includes an overview of the occupations which are expected to have the fastest employment growth from 2012 to 2022. It also identifies the occupational groups which are home to these occupations and the industry which typically employs a large share of these occupations.

South Dakota Occupational Employment Projections 2012 - 2022

Top Ten Fastest Growing

Occupational Title	2012 Workers	2022 Workers	Actual Change	Percent Growth
Interpreters and Translators	285	400	115	40.4%
Diagnostic Medical Sonographers	300	400	100	33.3%
Welding, Soldering and Brazing Machine Setters, Operators and Tenders	550	720	170	30.9%
Market Research Analysts and Marketing Specialists	410	535	125	30.5%
Computer-Controlled Machine Tool Operators, Metal and Plastic	330	420	90	27.3%
Physical Therapist Assistants	240	305	65	27.1%
Industrial Machinery Mechanics	845	1,070	225	26.6%
Helpers--Electricians	395	500	105	26.6%
Meeting, Convention and Event Planners	305	380	75	24.6%
Physician Assistants	470	585	115	24.5%

Notes: *Data is preliminary and subject to revision.*

Data for occupations with less than 200 workers in 2012 not included.

Number of workers data for 2012 and 2022 rounded to nearest five.

Data for occupations requiring less than a High School Diploma not Included.

Demand data is the summation of job openings estimated due to projected employment growth and job openings projected to be created due to replacement need of current workers. Replacement need is estimated by multiplying occupational employment estimates by national replacement rates supplied by the U.S. Bureau of Labor Statistics (BLS). These rates estimate the number of job openings, by occupation, which will be attributed to a worker permanently leaving an occupation (e.g., retirement, death, exits the workforce, etc.). Average annual demand data are calculated by dividing by ten, the number of years in the projection period. For more information, see http://dlr. sd.gov/lmic/projections_methodology.aspx

Source: *Labor Market Information Center, South Dakota Department of Labor and Regulation.*

Interpreters and Translators (27-3091)

Interpreters and translators interpret oral or sign language, or translate written text from one language into another. Individuals in this category also adapt software and accompanying technical documents to other languages and cultures. This occupation is part of the Arts, Design, Entertainment, Sports and Media Occupations group (27-0000). Interpreters and translators are projected to have the largest rate of occupational growth in South Dakota, with projected occupational employment levels indicating an increase of 115 workers (40.4 percent) over the next 10 years. Nationally, interpreters and translators are projected to add 29,300 workers (46.1 percent)

through 2022. The major employer of individuals in this occupation is the Professional and Technical Services industry.

Diagnostic Medical Sonographers (29-2032)

Diagnostic medical sonographers produce ultrasonic recordings of internal organs for use by physicians. They also have tasks such as cleaning, checking and maintaining sonographic equipment and submitting maintenance requests or performing minor repairs. In South Dakota, this occupation is projected to have the second fastest increase, with 100 workers (33.3 percent). This occupation is nationally projected to add 27,000 new jobs (46 percent) between 2012 and 2022. Individuals in this job classification belong to the Health Care Practitioners and Technical Occupations group (29-0000). Most individuals in this occupation work in the Health Care and Social Assistance industry. The driving force behind the large projected increases in healthcare fields is an aging population.

Welding, Soldering and Brazing Machine Setters, Operators (51-4122)

Individuals in this occupation set up, operate or tend welding, soldering or brazing machines or robots that weld, braze, solder or heat treat metal products, components or assemblies. Individuals who operate laser cutters or laser-beam machines are also included in this occupation. This occupation is projected to add 170 workers (30.9 percent) by 2022 in South Dakota. Nationally, this occupation is projected to increase by 10,600 workers (19.8 percent) by 2022. These setters and operators belong to the Production Occupations (51-0000) group, which, as a whole, is projected to grow at a much faster rate in South Dakota then it is nationally.

Market Research Analysts and Marketing Specialists (13-1161)

Individuals in this occupation research market conditions in local, regional or national areas, or gather information to determine potential sales of a product ofrservice, or create marketing campaigns. They may gather information on competitors, prices, sales and methods of marketing and distribution. Market research analysts and marketing specialists are part of the Business and Financial Operations Occupations group (13-0000). In South Dakota, this occupation is projected to have an increase of 125 workers (30.5 percent). Nationally, this occupation is projected to increase by 131,500 workers (31.6 percent) by 2022. Market research analysts are mostly employed in the Professional and Technical Services industry.

Computer-Controlled Machine Tool Operators, Metal and Plastic (51-4011)

Computer-controlled machine tool operators (metal and plastic) operate robots or computer-controlled machines to perform machine functions on metal or plastic work pieces. This occupation in South Dakota is projected to increase by 90 workers (27.3 percent) by 2022. Nationally, this occupation is projected to add 20,400 workers (14.5 percent) through 2022. This occupation is classified within the Production Occupations group (51-0000). Production occupations are projected to have little or no growth nationally. The manufacturing industry accounts for the largest share of workers in this occupation, which the BLS projected to decline 4.6 percent by 2022. In South Dakota, the manufacturing sector is projected to increase by 7.1 percent, which has a direct relationship and impact on the occupational projections in the production occupations.

Physical Therapist Assistants (31-2021)

Physical therapist assistants help provide physical therapy treatments and procedures. They also assist in the development of treatment plans, perform routine functions, document the progress of treatment and modify specific treatments as directed by a physical therapist. This occupation is classified within the Healthcare Support Occupations group (31-0000). South Dakota is projected to add 65 workers (27.1 percent) in this occupation by 2022. Physical therapist assistants nationally are projected to add 29,300 (41 percent) workers by 2022. This significant growth is due mainly to an increasingly aging population. As more individuals turn 65 years and older, the need for health care and health care support workers rises. The recently passed health care reform legislation is also expected to affect jobs within this group.

Industrial Machinery Mechanics (49-9041)

Individuals in the industrial machinery mechanics occupation repair, install, adjust or maintain industrial production and processing machinery or refinery and pipeline distribution systems. In South Dakota, industrial machinery mechanics are projected to increase by 225 workers (26.6 percent) by 2022. At the national level, industrial machinery mechanics are projected to add 60,300 (18.9 percent) jobs by 2022. Individuals in this occupation are classified as part of the Installation, Maintenance and Repair Occupations group (49-0000).

Helpers - Electricians (47-3013)

Electrician helpers assist electricians by performing duties requiring less skill. Duties include using, supplying or holding materials or tools, and cleaning the work area and equipment. This occupation is classified within the Construction and Extraction Occupations group (47-0000). In South Dakota, the number employed in this occupation is projected to increase by 105 workers (26.6 percent) over the next 10 years. This occupation is nationally projected to increase by 22,400 jobs (36.9 percent). In South Dakota, the construction industry is projected to be one of the fastest-growing which is the driving force behind the increase in this occupation.

Meeting, Convention and Event Planners (13-1121)

Individuals in this occupation coordinate activities of staff, convention personnel or clients to make arrangements for group meetings, events or conventions. Some job titles associated with this occupation are convention services manager, catering manager, event manager, and conference planner. In South Dakota, this occupation is projected to increase by 75 workers (24.6 percent). This occupation is nationally projected to add 31,300 new jobs (33.2 percent) between 2012 and 2022. This occupation is included in the Business and Financial Operations Occupations group (13-0000).

Physician Assistants (29-1071)

Physician assistants provide health care services typically performed by a physician, under the supervision of a physician. They conduct physicals, provide treatment and counsel patients. In some cases, they prescribe medication. In South Dakota, this occupation is projected to increase by 115 workers (24.5 percent). Nationally, this occupation is projected to add 33,300 new jobs (38.4 percent) by 2022. Once again, this growth is mainly driven by an aging population.

South Dakota Occupational Employment Projections 2012 - 2022

Top Ten in Average Annual Openings

Occupational Title	2012 Workers	2022 Workers	Percent Growth	Average Annual Openings
Registered Nurses	11,380	12,870	0	370
Customer Service Representatives	8,870	9,785	0	333
Childcare Workers	6,535	7,365	0	275
Heavy and Tractor-Trailer Truck Drivers	8,790	9,300	0	192
Nursing Assistants	6,310	6,885	0	177
Bookkeeping, Accounting and Auditing Clerks	10,465	11,275	0	177
Accountants and Auditors	4,295	4,670	0	164
Carpenters	6,075	6,920	0	160
Receptionists and Information Clerks	5,010	5,250	0	159
Sales Representatives, Wholesale and Manufacturing, except Technical and Scientific Products	5,280	5,715	0	147

Notes: *Data is preliminary and subject to revision.*

Data for occupations with less than 20 workers in 2012 not included.

Number of workers data for 2012 and 2022 rounded to nearest five.

Data for occupations requiring less than a High School Diploma not Included.

DDemand data is the summation of job openings estimated due to projected employment growth and job openings projected to be created due to replacement need of current workers. Replacement need is estimated by multiplying occupational employment estimates by national replacement rates supplied by the U.S. Bureau of Labor Statistics (BLS). These rates estimate the number of job openings, by occupation, which will be attributed to a worker permanently leaving an occupation (e.g., retirement, death, exits the workforce, etc.). Average annual demand data are calculated by dividing by ten, the number of years in the projection period. For more information, see http://dlr.sd.gov/lmic/projections_methodology.aspx.

Source: *Labor Market Information Center, South Dakota Department of Labor and Regulation.*

Occupations Projected to Be in Greatest Demand

Projections of job growth or decline indicate how occupational employment is expected to change, but average annual openings indicate the demand for workers based on both growth and replacement needs. New jobs account for only a portion of this projection. The other portion will be due to workers retiring, leaving the labor force or transferring from one occupation to another. Please note, we excluded from the table on the following page those occupations that require less than a high school diploma. Those entry-level occupations, by nature, have high rates of people advancing to other career fields as they gain more work experience and/or education, and thus historically have higher-than-average projected demand for workers. In this analysis, we wanted

to instead focus on occupations projected to have higher-than-average demand which require more workforce preparation.

Registered Nurses (29-1141)

Individuals in this occupation administer nursing care to ill, injured, convalescent or disabled patients. Registered nurses also assess patient health problems and needs, develop and implement nursing care plans, and maintain medical records. Registered nurses are typically required to have an associate degree or more post-secondary education. With a projected average annual demand of 370 workers, registered nurses rank first among South Dakota's high demand occupations through 2022. Employment is expected to increase by 13.1 percent over the 10-year period. Nationally, registered nurses are projected to have 105,260 average annual openings, and employment is projected to grow by 19.4 percent through 2022.

Customer Service Representatives (43-4051)

Customer service representatives interact with customers to provide information in response to inquiries about services and products and to handle and resolve complaints. They work in customer contact centers, insurance agencies, banks, stores or other places that have contact with customers. Typically, occupations in this category require a high school diploma. In South Dakota, the average annual demand for customer service representatives is projected to be 333 (10.3 percent) through 2022. Nationally, this occupation is projected to have 94,160 average annual openings, and employment is projected to grow by 12.6 percent through 2022.

Child Care Workers (39-9011)

Child care workers attend to children at schools, businesses, private households and child care institutions. They perform tasks such as feeding, bathing and dressing children. Individuals in this occupation are typically required to at least have a high school diploma. In South Dakota, the average demand for child care workers is projected to be 275 openings annually through 2022. Employment is projected to increase by 12.7 percent during this period. Nationally, annual openings for child care workers are projected to be 57,000 and employment is expected to increase by 14 percent through 2022.

Truck Drivers, Heavy and Tractor-Trailer (53-3032)

Individuals classified in this occupation drive a tractor-trailer combination or a truck with a capacity of at least 26,000 pounds and are typically required to have at least a high school diploma. The demand in South Dakota is projected to be 192 openings annually through 2022. Employment is projected to increase by 5.8 percent over the 10-year period. Nationally, annual openings for truck drivers are projected to be 46,470, and employment is expected to increase by 11.3 percent through 2022.

Nursing Assistants (31-1014)

Nursing assistants provide basic patient care under the direction of a nursing staff. They feed, bathe, dress, groom or move patients or change linens. A nursing assistant may also transfer or transport patients. Typically, occupations in this category require at least a high school diploma. In South Dakota, the average annual demand for nursing assistants is projected to be 177 (9.1 percent growth) through 2022. Over the same time frame

nationally, annual openings for nursing assistants are projected to be 59,360 and an increased growth rate of 21.1 percent.

Bookkeeping, Accounting and Auditing Clerks (43-3031)

Bookkeeping, accounting and auditing clerks compute, classify and record numerical data to keep financial records current and complete. They also perform any combination of routine calculating, posting and verifying duties to obtain primary financial data for use in maintaining accounting records. Typically, occupations in this category require at least a high school diploma. South Dakota is projected to have 177 annual openings through 2022, and employment is projected to increase by 7.7 percent over the 10-year period. Nationally, BLS is projecting this occupation will have 37,000 annual openings and 11.4 percent employment growth to 2022.

Accountants and Auditors (13-2011)

Accountants and auditors examine, analyze and interpret accounting records to prepare financial statements. Individuals in this occupation also install or advise on systems of recording costs or other financial and budgetary data. They usually must obtain a bachelor's degree. In South Dakota, the average annual demand for accountants and auditors is projected to be 164 openings. Employment is expected to increase by 8.7 percent over the 10-year period. Nationally, accountants and auditors are projected to have 54,420 annual openings, with employment expected to rise by 13.1 percent through 2022.

Carpenters (47-2031)

Carpenters construct, erect, install or repair structures and fixtures made of wood. Examples of carpentry include building frameworks, joists, studding, rafters, door frames and hardwood floors. Individuals in this occupation may also install cabinetry, siding, drywall or insulation. Carpenters typically need a high school diploma at minimum. In South Dakota, the average annual demand for carpenters is projected to be 160 openings through 2022. Employment is expected to grow by 13.9 percent over the 10-year period. Nationally, this occupation is projected to have 32,920 average annual openings and employment growth of 24.2 percent through 2022.

Receptionists and Information Clerks (43-4171)

Receptionists and information clerks answer inquiries and provide information to the general public, customers, visitors and other interested parties regarding activities conducted at an establishment. Individuals in this occupation are typically required to have a high school diploma. In South Dakota, the average annual demand for receptionists and information clerks is projected to be 159 and employment is projected to rise by 4.8 percent over the 10-year period. Nationally, this occupation is projected to have 40,690 average annual openings, and employment is expected to rise by 13.5 percent through 2022.

Sales Representatives, Wholesale and Manufacturing, except Technical and Scientific (41-4012)

Individuals in this occupation sell goods for manufacturers and wholesalers to businesses or individuals. Sales representatives typically need a high school diploma and substantial knowledge of the items they sell. The number of average annual openings for this sales representative occupation is projected to be 147 in South

Dakota through 2022. Employment is expected to grow by 8.2 percent over the 10-year period. Nationally, this occupation is projected to have 42,070 average annual openings, and total employment is expected to grow by 8.9 percent through 2022.

Projected High-Demand and High-Wage Occupations

Because the Department of Labor and Regulation (DLR) has limited resources, workforce development efforts must concentrate on critical need fields that pay well enough to justify investment in training and education. As a starting point in identifying occupations for which they would invest training and education dollars, DLR looked to LMIC for identifying high-demand, high-wage occupations. When occupations were first targeted, LMIC provided the most current occupational employment projections data available at the time, which was the 2010-2020 data. In determining "high-demand" occupations, the LMIC calculated the average number of annual openings across all occupations (an average of 20 per year); thus, those occupations projected to have more than 20 openings per year, on average, were considered as "high-demand" occupations. Similarly, in identifying "high-wage" occupations, LMIC considered the average wage across all occupations. Those occupations with a wage higher than that average were considered "high-wage." Occupations had to meet both criteria to be considered.

In addition to the projected demand for workers and wage estimates, DLR administration also considered the following in identifying targeted occupations:

☑ Current indicators of supply and demand in occupations as indicated by SDWORKS, DLR's online data base of job openings and job seekers

☑ Employer input regarding worker and skill shortages

The targeted occupations were then grouped together in categories of similar occupations as shown on the following pages:

Targeted Occupations

Accounting/Finance
Accountants and Auditors
Cost Estimators
Financial Analysts
Financial Managers
Loan Officers

Engineers
Civil Engineers

Information Technology
Computer Support Specialists
Network and Computer Systems Administrators
Software Developers, Applications

Mechanics

Automotive Service Technicians and Mechanics
Bus and Truck Mechanics and Diesel Engine Specialists
Industrial Machinery Mechanics

Nurses

Registered Nurses

Physicians

Family and General Practitioners

Sales Representatives

Sales Representatives, Wholesale and Manufacturing, except Technical and Scientific Products
Sales Representatives, Wholesale and Manufacturing, Technical and Scientific Products

Specialty Trades

Electricians
Heating, Air Conditioning and Refrigeration Mechanics and Installers
Plumbers, Pipefitters and Steamfitters

Supervisors

First-Line Supervisors of Construction Trades and Extraction Workers
First-Line Supervisors of Mechanics, Installers and Repairers
First-Line Supervisors of Office and Administrative Support Workers
First-Line Supervisors of Production and Operating Workers

Targeted Occupations, continued

Teachers

Elementary School Teachers, except Special Education
Middle School Teachers, except Special and Career/Technical Education
Secondary School Teachers, except Special and Career/Technical Education
Special Education Teachers, Preschool, Kindergarten and Elementary School

Truck Drivers

Heavy and Tractor-Trailer Truck Drivers

Welders

Welders, Cutters, Solderers and Brazers

South Dakota Projected High Demand/High Wage Occupations 2012 - 2022

SOC* Code	Occupational Title	2012 Employment	2022 Employment	Average Annual Demand	Average Annual Wage
00-0000	Total, All Occupations	472,605	505,870	20	$37,210
11-1011	Chief Executives	1,145	1,160	26	$170,566

51-8031	Water and Wastewater Treatment Plant and System Operators	640	675	26	$38,654
53-3032	Heavy and Tractor-Trailer Truck Drivers	8,790	9,300	192	$38,009

South Dakota Projected High Demand/High Wage Occupations 2012 - 2022
Notes and Sources

*SOC -   Standard Occupational Classification, 2010

Notes: Data is preliminary and subject to revision.

Data for occupations with less than 20 workers in 2012 not included.

Number of workers data for 2012 and 2022 rounded to nearest five.

n/a - Wage estimates not available due to confidentiality or reliablity concerns.

Data presented for occupations will not sum to totals due to rounding and non-publishable data for additional occupations included in totals. Demand data is the summation of job openings estimated due to projected employment growth and job openings projected to be created due to replacement need of current workers. Replacement need is estimated by multiplying occupational employment estimates by national replacement rates supplied by the U.S. Bureau of Labor Statistics (BLS). These rates estimate the number of job openings, by occupation, which will be attributed to a worker permanently leaving an occupation (e.g. retirement, death, exits the workforce, etc.). Average annual demand data are calculated by dividing by ten, the number of years in the projection period. The average annual demand across all occupations is 20; thus those occupations with annual average demand greater than 20 are considered as having higher than average annual demand through 2022. For more information, see http://dlr.sd.gov/lmic/projections_methodology.aspx. Wage data are May 2013 South Dakota Occupational Worker and Wage estimates, updated through the quarter ending June 2014 using the U.S. Bureau of Labor Statistics' Employer Cost Index. For more information on wage data, see http://dlr.sd.gov/lmic/technicalnotes_wages.aspx.
